

What are your key takeaways from today's conference?

Good that there are many clever people researching digitalization :-)

Good work Leif and colleagues!

Looking forward to the next step: what is the next step?

Multi disciplinary perspectives on digitalization needed!

Digitalization as a way to overcome challenges and contribute to sustainability

An even greater variety of disciplines and research areas would add a lot to the subject

The importance of data - in many different contexts. But we also need to reflect on the limitations of data, as well as the dangers (ref. China's social credit system)

There are so many interesting topics to research. We are lucky to be dealing with the exciting field of digitalisation.

Appreciation of co-development and multi-disciplinary approaches to sustainable development.

What are your key takeaways from today's conference?

Time management is important ;-)

We have to open our arms to more digitalization or we will die out like the dinosaurs ;-)

Missing "Open Space"

Data-driven culture is a critical barrier/enabler for successful digital transformation

We need at least one more day to discuss: now! :-)

socio-technical theory and affiliated theories are still highly relevant. We need to avoid technological determinism (which seems to be underlying much of the discourse surrounding digitalisation)
